

PSA - Details

Comments from the Doctor's Office

Psa elevated with pt. With known prostate cancer ; unsure why this lab was performed by our office instead of urology; advise he follow up promptly with Dr. Boren/urologist. Last notes reviewed.

Thyroid slightly underactive; would not advise starting any thyroid medication presently but advise repeat diabetic and thyroid labs in 12 weeks. Please schedule office visit.

Urine protein a little more than is expected. Continue to drink plenty of water daily. Will monitor.

Wbc elevated as was in past. Advise pt. See oncology and urology; may be due to prostate cancer. Pt.had appt. To see them in June but traumatic injury of finger took precedence.

Hga1c, liver, renal, cholesterol, uric acid all stable.

Component Results

Component	Your Value	Standard Range	Flag
PROSTATE CA SC(PSA)	Your Value 9.8 ng/mL	<i>Standard Range</i> 0.0 - 4.0 ng/mL	Flag H

PSA was performed using the Roche Immunoassay method. Values obtained from different assay methods cannot be used interchangeably. PSA levels, regardless of value, should not be interpreted as absolute evidence of the presence or absence of disease.

HIGH DOSES OF BIOTIN TAKEN WITHIN 8 HOURS OF BLOOD COLLECTION MAY INTERFERE WITH THE RESULTS OF THIS ASSAY

General Information

Ordered by Jeffrey L Tharp, MD

Collected on 11/01/2021 8:28 AM from Serum (Blood)

Resulted on 11/02/2021 2:49 AM

Result Status: Final result

This test result has been released by an automatic process.

Results are now available to patients and physicians at the same time. Please allow your physician and care team at least two business days to contact you about abnormal results. For more information about patient record transparency, please [click here](#)
